THE DOCUMENT THE ORIGINAL DOCUI

MENT WAS REDACTED

#### **General product information**

The Logo light up headphone be tested is supplied by a built-in 3.7V 400mAh Li-polymer battery, and charged via the Micro-B USB port. It was consider as movable apparatus.

The product was submitted and tested for use at the manufacturer's recommended ambient temperature (Tma) of 35 °C.

#### Summary of testing

The test item passed.

#### Copy of marking plates

Logo light u Model: 243		one
Rating: 5V:		CE
Importer: xxxx	Address: xxx	
The second se	le In China	

#### Remark:

1) The CE marking and WEEE symbol (if any) should be at least 5mm and 7mm respectively in height.

2) The markings and instructions are the minimum requirements required by safety standard. For final production samples, the additional markings which do not give rise to misunderstanding may be added.

3) As declared by the manufacturer, the importer (and manufacturer, if it is different)'s name, registered trade name or mark and the postal address will be marked on the products before being place on the market.

4) Marking on the packaging or in a document accompanying the electrical equipment is only acceptable if it is not possible to place such markings on the product.

The results show of this test report refer only to the sample(s) tested unless otherwise stated and the sample(s) are retained for 30 days only. The document is issued by AGC, this document cannot be reproduced except in full with our prior written permission. The more details and the authenticity of the report will be confirmed at http://www.agc.gatt.com.

	EN 60065				
Clause	Requirement – Test	Result - Remark	Verdict		
6	Hazardous radiations	60 N	C N		
	Replace the entire subclause by the following:Apparatus including a potential source of ionizing radiation shall be so constructed that personal protection against ionizing radiation is provided under normal operating conditions and under fault conditions.Compliance is checked by measurement under the following conditions:In addition to the normal operating conditions, all controls adjustable from the outside BY HAND, by any object such as a tool or a coin, and those internal adjustments or pre-sets which are not locked in a reliable manner, are adjusted so as to give maximum radiation whilst maintaining an intelligible picture for 1 h, at the end of which the measurement is made.NOTE 1 Soldered joints and paint lockings are examples of adequate locking. The dose-rate is determined by means of a radiation monitor with an effective area of 10 cm², at any point 10 cm from the outer surface of the apparatus Moreover, the measurement shall be made under fault conditions causing an increase of the high-voltage, provided an intelligible picture is maintained for 1 h, at the end of which the measurement is made.The dose-rate shall not exceed 1 µSv/h (0,1 mR/h) taking account of the background level.NOTE 2 These values appear in Council Directive 96/29/Euratom of 13 May 1996. A picture is considered to be intelligible if the following conditions are met a scanning amplitude of at least 70 % of the usable screen width; - a minimum luminance of 50 cd/m² with locked blank raster provided by a test generator; - a horizontal resolution corresponding to at least 1,5 MHz in the centre, with a similar vertical degradation;				
16	- not more than one flashover per 5 min. External flexible cords		N		
16.1	Add the following note after the first paragraph:           NOTE Z1 The harmonized code designations corresponding to the IEC cord types are given in Annex ZD.	N	N

#### Report No. : AGC05794180902ES01 Page 27 of 43

	EN 60065				
Clause	Requirement – Test	Result - Remark	Verdict		
21.2	Equipment requirements		N		
	No safety provision is required for equipment that complies with the				
	following:		15. 700		
	- equipment provided as a package (personal music player with its	100	The Compliant		
	listening device), where the acoustic output $L_{Aeq,T}$ is $\leq 85 \text{ dB}(A)$	The Banglance O The	attor of Glos		
	measured while playing the fixed "programme simulation noise" as	of Global C. Nites			
	described in EN 50332-1; and				
	- personal music player provided with an analogue electrical output				
	socket for a listening device, where the electrical output is $\leq 27 \text{ mV}$				
	measured as described in EN 50332-2, while playing the fixed	10 100			
	"programme simulation noise" as described in EN 50332-1.	Thomas Company	Contestation		
	NOTE 1 Wherever the term acoustic output is used in this subclause, the	C The ration of Court			
	30 s A-weighted equivalent sound pressure level LAeq,T is meant. See	inter V			
	also Z1.5 and Annex ZE.				
	All other equipment shall:	- 1117-	100		
	a) protect the user from unintentional acoustic outputs exceeding	the second second	Some and		
	those mentioned above; and	Joba Com	- 6		
	b) have a standard acoustic output level not exceeding those	Autostanoo			
	mentioned above, and automatically return to an output level not				
	exceeding those mentioned above when the power is switched off;				
	and		一位		
	c) provide a means to actively inform the user of the increased	The Complete	E FA Com		
	sound pressure when the equipment is operated with an acoustic	Garandi Globa	E anon of C		
	output exceeding those mentioned above. Any means used shall	These and	200		
	be acknowledged by the user before activating a mode of operation				
	which allows for an acoustic output exceeding those mentioned				
	above. The acknowledgement does not need to be repeated more				
	than once every 20 h of cumulative listening time; and				
	NOTE 2 Examples of means include visual or audible signals. Action from				
	the user is always required.		-		
	NOTE 3 The 20 h listening time is the accumulative listening time,				
	independent how often and how long the personal music player has been switched off.		lim-		
	d) have a warning as specified in Z1.3; and				
	e) not exceed the following:				
	1) equipment provided as a package (player with its listening				
	device), the acoustic output shall be $\leq 100 \text{ dB}(\text{A})$ measured while				
	playing the fixed "programme simulation noise" described in EN				
	50332-1; and				
	2) a personal music player provided with an analogue electrical				
	output socket for a listening device, the electrical output shall be $\leq$				
	150 mV measured as described in EN 50332-2, while playing the				
	fixed "programme simulation noise" described in EN 50332-1.				
	For music where the average sound pressure (long term $L_{\text{Aeq},T}$ )	- v			
	measured over the duration of the song is lower than the average	line	100		
	produced by the programme simulation noise, the warning does not	· We way	Compliance		
	need to be given as long as the average sound pressure of the	Ana Comp			
	song does not exceed the basic limit of 85 dB(A). In this case, $T$	Allestations	.0		
	becomes the duration of the song.	C.V
